

Data Science Intern at Data Glacier

Project: Hate Speech Detection using Transformers (Deep Learning)

Week 7: Deliverables

Name: Kritika Pathak

University: USC

Email: krpathak@usc.edu

Country: USA

Specialization: Data Science

Batch Code: LISUM23

Table of Contents:

1. Project Plan	3
2. Problem Statement	3

1. Project Plan

Weeks	plan
Weeks 07	Problem Statement, Data Collection, Data Report
Weeks 08	Data Preprocessing
Weeks 09	Feature Extraction
Weeks 10	Building the Model
Weeks 11	Model Result Evaluation
Weeks 12	Flask Development + Heroku
Weeks 13	Final Submission (Report + Code + Presentation)

2. Problem Statement

The term hate speech is understood as any type of verbal, written or behavioural communication that attacks or uses derogatory or discriminatory language against a person or group based on what they are, in other words, based on their religion, ethnicity, nationality, race, colour, ancestry, sex or another identity factor. In this problem, We will take you through a hate speech detection model with Machine Learning and Python.

Hate Speech Detection is generally a task of sentiment classification. So for training, a model that can classify hate speech from a certain piece of text can be achieved by training it on a data that is generally used to classify sentiments. So for the task of hate speech detection model, We will use the Twitter tweets to identify tweets containing Hate speech.
